INTRODUCTION

Hockey Stick is a stick of particular shape made out of mulberry wood and cane. Hockey is one of the major games of the world. As per the registration procedure of players in foreign countries, there are more than one lac players each in Holland and West Germany, and 50,000 in New Zealand. Similarly, East Europeans, South American countries have also started popularizing hockey game. In India, now more stress is being laid on the encouragement of hockey.

MARKET :

Hockey Sticks are mainly manufactured in Punjab and U.P. due to availability of mulberry wood being grown on the banks of canals, roadsides and other areas. This type of mulberry wood is also available in considerable quantity in parts of Haryana, Rajasthan and Himachal Pradesh. The wood available in Punjab is of high quality flexibility and parallel grain structure, which resists the jerk while hitting the ball and does not crack. Cane is available in Andaman and Nicobar islands, Karnataka, Kerala and Goa, etc. Hockey stick units can be started by getting mulberry blades, if wood available is not of good quality. Mulberry grown for breeding of silk worms is not suitable for manufacturing hockey sticks.
