

PROJECT PROFILE ON CERAMIC GLAZED WALL TILES

Detailed project Report on CERAMIC GLAZED WALL TILES (Small Scale production Enterprise)

- 1.Product :- Ceramic Glazed Wall Tiles
- 2.Production Capacity :- 2160T/ Capacity per year
(Valued Rs. 257.28 Lakhs)
- 3.Month & Year of Preparation :- March ,2011

6.Prepared by : Br.MSME-DI
W.B.S.I.D.C Industrial Estate
J.P.Avenue, Durgapur-12
Phone No. 0343-2557129

Introduction:

This project envisages production of Ceramic Glazed Tiles which is having a very bright prospect in bathrooms and kitchen in modern housing and in Analytical Laboratories and toilets attached to Railway stations. Due to the liberalized economic policy followed and encouragement by Govt. of India future prosperity of this product in the eastern zone is obviously bright. Moreover there is not a single MSEs in manufacturing ceramic glazed tiles in total Eastern Region which has a vast demand of this product.

Uses of Ceramic Glazed Tiles:

Ceramic Glazed tiles are made of porous body with a coating of white or colored Glaze. These are used extensively in the Bathrooms, Kitchen in modern buildings and in Hospitals and Analytical Laboratories, Toiletries attached to Railway platforms. This is because of this products have properties like good resistance to weather and chemicals, having high strength, hard, glossy surface with different colors and pleasing appearance. In the near future the chances for replacing these items by other materials look very bleak. These tiles are rather cheap, easy to clean, have more life and are available in pleasing colours.

Market Potential:

The market of ceramic glazed Tiles are very bright since its demand is increasing at a faster rate. The reasons are not far to seek. The improved living standard coupled with good economic situation along with supporting Govt. policies for housing sector speak itself for the demand for these products. Side by side population growth is also creating a positive demand position of these products. These items form an essential and integral part of consuming sector like housing, educational and research institutions, hospitals, Industries, hotels, restaurants, cinema halls and other public places. The demands of these products also increase by the need of renovation works of the old above similar buildings. The housing

Development Finance Corporation and other Govt. Corporations and Banks for financing housing will go a long way for the demand of these products. The private sector which accounts for the lion's share of the investment in housing and construction is bound to increase further. Further Govt. of India as well as State Govt. is taking more care for the up-keeping of rural sanitation and water supply systems which will indirectly influence and increase the demand of ceramic glazed tiles. Further during the last few years before global economic recession the export opportunities of these tiles from Middle East and Developing countries was very encouraging and hopefully after the recession export opportunities of these tiles will come back. At present there are over 13 Medium scale enterprises and 60 small scale enterprises in this field but there are no enterprises in Eastern and North Eastern area. The units that register EM-II Under small scale Enterprises will go on enjoying the prevailing State Govt. Incentives and Central Govt. Incentives as per new Industrial Policy 2006. Considering these opportunities new generation entrepreneurs could think of manufacturing this products” **Glazed Ceramic Tiles**”

Quality Control and Standards:

The raw materials are tested before taken into use for production and after the result is satisfactory they are used. During the manufacturing process quality is checked at the times of grinding, mixing and pressing. Finally finished products are selected at random and tested to ascertain its asset values with the help of Modulus of Rupture test (MOR), Warpage, Apparent porosity, Bulk density, Crazeing test, Scratch Hardness test on a regular basis as per BIS specification.

The standards being followed while making Ceramic Glazed Wall Tiles are:

IS : 777-1970 –Glazed tiles

IS : 2840-1965 –China clay for ceramic Industry

IS : 4589-1979 –Plastic clay for Ceramic Industry

Manufacturing Process:

The raw materials like local clay, China clay, Ball clay, Wollastonite chips and pitchers are mixed and ground thoroughly to form a uniform slip. They are unloaded in an agitator. The slip is screened, magnetized and kept in an agitating tank with addition of required deflocculants. The material is then passed through a filter press to get rid of soluble salts to make a plastic body. The plastic body is dried in a dryer to get the dried mass of 5-6 % moisture. The dried mass is subsequently fed into a pan mill. The output of the pan mill is stored in vertical silos. The mixture is now ready for pressing tiles. The pressed green tiles are stacked on the kiln car in a stack of 3 ft. height and dried by using hot waste air from the kiln. The green tiles are dried for 20 hrs. The dried tiles are pushed along with the kiln car and allowed for firing for 20 hrs. The outputs are known as Biscuits. The hot tiles at above 250-300°C are allowed to cool in nature normally. The cooled tiles when come at normal room temperature 30-40°C are screened through online sorting followed by Hammer test and Brushing, water spraying and Glazing. Then the Glazed wares are loaded into refractory cassettes on an endless moving conveyor.

The cassettes are loaded onto Glost Kiln car and allowed for firing at a temperature of 1040°C for a cycle of 18 hrs. The cooled tiles are unloaded from the cassettes and allowed for online inspection. The tiles are checked into 1st i.e Prime, 2nd as commercial grade, 3rd as Reject Variety. After sorting the tiles are packed and stripped and stamped and sent to stockyard. A single pack of tile weighs 16 kg and ready for sale.

Pollution Control:

Glaze tile has a share in the present Environmental Degradation. So it is advisable to get NOC from Pollution Control Authority as per statutory norms. In this project it would be better if the installed chimney height is of 30 ft and all the machineries are fitted with pollution arresting measures.

Energy Conservation:

Considering the fuel reserves and its spiraling price it is essential to adopt energy conservation system by the entrepreneur. The efficiency of a furnace will depend

on how efficient the combustion system is and secondly how best the generated heat is utilized.

Energy conservation could be achieved through following process:

- 1) Complete combustion with minimum excess air.
- 2) Proper heat distribution.
- 3) Operating the kiln at desired temperature.
- 4) Reducing heat losses from the openings.
- 5) Minimizing wall losses.
- 6) Waste heat recovery from fuel gasses and utilization for Drying Tiles
- 7) Control of Chimney draught and kiln pressure
- 8) Use of lubricants and proper maintenance

So the efficiency of a kiln will depend on how efficient the combustion system is and secondly how best the generated waste heat is utilized .So, it is always recommended that standard and good quality of fuel should be used.

Basis & Presumptions:

1. The estimates are drawn for a capacity ,generally considered techno economically viable for a model type of manufacturing unit.
2. The cost in respect of office space,auxiliary machineries,raw materials and the service charges are generally considered the market value prevails at the time of preparation of the project report and may vary depending upon various factors.
3. Salaries and wages to be given to the officers and employees are in accordance to the present wage structure of Govt.of West Bengal.
4. Considering inflation rate and present Global economy condition interest rate for Term Loan and Working Capital Loan are considered to be @ 16% per annum
5. Margin Money from the promoters will be 25% for fixed Assets and 25% for working capital
6. Calculations have been made on the basis of three shifts operation and at 60% capacity utilization initially.

Project Implementation:

It is expected that nine months will be sufficient to complete all activities of the project till commercial production is achieved.

Infrastructural Facilities:

1. Power 205 h.p of power will be required for this project.The entrepreneur should approach appropriate authority accordingly.
2. Raw material availability : Except one raw material from Janshi and other raw material are locally available.
3. Water: Sufficient water @ 10KL will be required daily and suitable bore water will suffice if normal supply water from corporation is not available.
4. Transport: The unit should be in a place where it should be connected with road and Rail transport, so that there should be no problem in arranging raw materials and also dispatches of finished products.
5. Man power: Total man heads requirement for this project will be around 20 and since it is an established technology and as such there will no problem in getting suitable manheads for this project.
6. Registration & Licenses: The entrepreneur should obtain all relevant registration from DIC and other Govt. offices before commencement of business activities. This is must.
7. Pollution : There will be no harmful disposal of effluents .However entrepreneur should obtain NOC From pollution control board as per statutory norms.

Preoperative Expenses:

Sl.no	Particulars	Amount in Rs
01.	Company formation and legal expenses	4,00,000/-
02.	Project Report ,Technical assistance ,Civil plan and Estimates	2,50,000/-
03.	Travelling expenses	75,000/-
04.	Miscellaneous expenses	20,000/-
	Total: Rs.	7,45,000/-

Description of land and Building:

Sl.no	Particulars	Specifications	Amount in Rs.
01.	Land @ Rs.4.5 lac/Acre + 10% registration expenses	02 Acre	9,90,000/-
02.	Work shed @ Rs.325/- sq/ft Raw material processing area 7000sq.ft Processing Zone 1000sq.ft. Conveyor Area 2000 sq.ft Glazing Bay 7200 sq.ft. Kiln area 4000 sq.ft. Finished Goods area 4000sq.ft.	25200 sq.ft	81,90,000/-
03.	Boundary wall	1176 rft.	2,35,200/-
04.	Office @ Rs.350/sq.ft.	400 sq.ft.	1,40,000/-
05.	Security office and Gate	L.S.	20,000/-
06.	Staff room and Toilet @ Rs.250/ - sq.ft.	600 sq.ft.	1,50,000/-
07.	Laboratory Room @ Rs.350/- sq.ft.	800 sq.ft.	2,80,000/-
08.	Land development	L.S.	50,000/-

05.	Other consumables like oil & lubricants			5,000/-
06.	Repairs and Maintenance			25,000/-
07.	Miscellaneous			10,000/-
			Total :	91,000/-
Working capital Assessment				
Sl.no.	Particulars			Amount in Rs
01.	Fuel stock (2 days)			36,400/-
02.	Raw materials (10 weeks)			11,20,000/-
03.	Work in progress (01 week)			4,52,168/-
04.	Finished stock (14 days)			9,04,336/-
05.	Sundry Debtors (8 weeks)			32,29,770/-
			Total :	57,42,770/-

Total Capital Investment :

Total Fixed Capital Rs.2,96,19,200/-

Working Capital Requirement Rs.57,42,500/-

Total : Rs. 3,53,61,700/-

Manufacturing cost Per Month :

Raw materials	4,48,000/-
Salary and wages	80,000/-
Utilities and Fuels	6,03,000/-
Consumables	3,93,000/-
Other expenses	91,000/-
Depreciation on Building @5%	41,000/-
Depreciation on Plant and M@10%	1,50,000/-
Depreciation on other Fixed Assets @20%	2000/-
Interest on Term Loan @16%	2,79,000/-
Interest on Working Capital @ 16	57,000/-
Total :	21,44,000/-
Manufacturing cost per annum	257,28,000/-
Total production Per Month	180 T

Sales Proceeds per month :

@ Rs.19,000/-M.T. = Rs.36,00,000/-

Gross Sales Proceeds per annum = Rs.432,00,000/-

Net sales per annum (less excise) = Rs.378,00,000/-

Profit per month = Rs.10,13,000/-

Profit per annum = Rs.121,60,000/-

Return on sales = 28.15 %

Return on Investment = 34.30%

Break Even Analysis:

Contribution = 199.36 lacs

Variable cost :Sales – contribution = 378-199.36 =178.64 lac

Fixed cost per month :

Salary and Wages (40%) Rs. 32,000/-

Utilities (20%) Rs. 1,21,000/-

Other Expenses (25%) Rs. 23,000/-

Depreciation Rs. 1,93,000/-

Interest On Term loan Rs. 2,79,000/-

Total Rs. 6,48,000/-

Fixed cost per annum Rs. 77.76 lacs

Break Even Sales (BES) = $F/(C/S) = 77.76 / (199.36/378) = 77.76/0.527$

= 147.55Lacs or 39% of net sales

- 1). J.K.Minerals, Station Road,Janshi
- 2). Golab Chand Kotcher,AjmerRoad,Bikaneer
- 3). Plastic Clay and China Clay; Md.Bazar,Birbhum,W.B.

Resource Centre of Technology:

1. Br.MSME-DI,Govt.of India,J.P.Avenue,Durgapur 12, W.B
2. Central Glass and Ceramic Research Institute,Jadavpur,Kolkata,
3. Govt. College of Engg. & Ceramic Technology, A.C.BanerjeeLane, Kol 10

List of the units set up by using this project Report:

It is completely a new detailed project Report prepared for the eastern Zone of India keeping technology at par with the technology being used in western zone of India. At present the tiles are coming from Western Zone,Southern Zone of India due to availability of better quality of fuel e.g.Natural Gas Or. CNG. In the eastern Zone now a days CNG is approachable and with this any new entrepreneur may find enough potential for this product in the eastern Zone of India.
