

Introduction :

Due to increase in population and standard of living there is a good market for this type of unit. This rolling or polishing saree keeps one trim and active. It is becoming more and more popular as every working woman or housewife wants that she should look beautiful or attractive. Its use is more popular particularly among the educated women. It is expected that the demand for the product will increase due to increase in demand for sarees. Raw materials required for Saree Rolling and Polishing are Starch powder and others.

Process of Manufacture: After washing the saree either cotton or silk the starch will spray. Those sarees will keep for drying, these sarees will fold on a uniform wooden piece to get uniform foldings. After keeping for six to eight hours the saree will remove from wooden piece and press with the help of steam iron. With the increase in number of working women, the demand for this product is increasing. Every working woman or housewife wants to be attractive and modern especially in offices, marriage functions, parties and festivals. So there is a potential for setting up of new units in this area.
